CLEAN CURRENTS BROKERS GREEN ENERGY PURCHASE FOR INSPIRE NUTRITION IN DC

Inspire Nutrition at 400 Massachusetts Ave, NW Announces Purchase of 100% Wind Energy

WASHINGTON, DC (July 1, 2008) – Clean Currents, LLC, a DC area clean energy business, today announced that it has successfully brokered an arrangement with *Inspire Nutrition*-located at 400 Massachusetts Ave, NW to switch to 100 percent wind power in an effort to reduce dangerous greenhouse gas emissions and to encourage energy independence.

As a certified holistic health counselor, consultant, healthy cook, and educator, Christina Giallourakis, the founder of Inspire Nutrition, offers an integrated approach to nutrition and wellness for individuals, organizations, and schools in the DC metropolitan area. Christina helps her clients achieve optimal health and real wellbeing through integration of proper nutrition, regular fitness routines, and a balanced lifestyle.

Clean Currents is a licensed clean energy broker and aggregator in Maryland and also operates in the District of Columbia, Chicago, Texas, and other areas where there is a competitive electricity market. It was established in 2005 to promote solutions to today's biggest environmental challenges – global warming and air pollution, and to assist businesses in taking a greater responsibility for protecting the environment while conducting their operations.

“We were thrilled to help Inspire Nutrition meet its commitment to clean energy and clean air,” said Gary Skulnik, Co-founder and President of Clean Currents. “We salute Inspire Nutrition for their environmental leadership and we extend the same offer to every business in our region to assist them in going green and possibly saving money.”

Other clean energy deals recently brokered by Clean Currents include the American Humanist Society, The Phoenix, Red Orchard, Main Event Caterers, and the Bethesda Co-op.

“More and more businesses are coming to understand that technology exists today to dramatically cut greenhouse gas emissions that cause global warming,” Skulnik said. “Businesses can go green, help the environment, and possibly save money when they work with Clean Currents.”
